

Role of Human Papillomavirus type-16 infection for various cancers as well as Alzheimer's disease and Autism, and safe, effective treatment of cancer by the combined use of optimal doses of Vitamin D3, Taurine, & PQQ when they are positively synergetic with additional advantage of significant urinary excretion of HPV-16 Virus and other bacterial and fungal infections

Yoshiaki Omura

Adjunct Prof., Dept. of Family & Community Medicine, New York Medical College;
President, International College of Acupuncture & Electro-Therapeutics;
Former Director of Medical Research, Heart Disease Research Foundation, USA

A previous analysis of 500 breast cancer patients' mammograms indicated that more than 90 percent of breast cancer tissue has a human papillomavirus type-16 (HPV-16). Type-18 was found in less than a few percent. Human papillomavirus was measured non-invasively and rapidly using strong Electromagnetic Field (EMF) Resonance phenomenon between 2 identical substances with the same weight, for which US patent was given in 1993. Because of these findings, the relationship between HPV-16 and various cancers was studied. In various cancers including brain tumors, a significant infection of HPV-16 was detected in every cancer tissue evaluated. HPV-16 was found to be highly infectious, particularly when oral cavities have HPV-16 infection of more than 2000ng BDORT Units. In families where one member has a strong infection of HPV-16, other members of the family often have the same degree of infection. When one has a strong HPV-16 infection, there is a high tendency of developing cancers at the most infected organ. Even if the patient does not develop malignancies, when a strong infection of HPV-16 virus is present, β -amyloid (1-42), which is increased in Alzheimer's disease and autism, is also increased in the infected area of the body. When this is increased in cancer tissue, we found naturally existing molecules Vitamin D3 & its derivatives, Taurine (sulfur containing one type of amino acid) and PQQ were often reduced in the cancer tissue or infected areas. Therefore, we give these naturally existing substances, namely optimal doses of Vitamin D3 (400 I.U.), Taurine (~175mg), and PQQ (5-10mg). When these 3 substances are independently used, an optimal dose produces very significant anti-cancer effects and increases Acetylcholine and DHEA levels. In addition, viruses such as HPV-16 & CMV, bacteria such as Lyme Borrelia Burgdorferi spirochaete, & fungi like Candida Albicans are excreted through urine in very significant amounts. These effects are even more beneficial when used in a compatible combination of all 3, particularly when a compatible dose of Cilantro tablets is used together. We also found many atrial fibrillations are due to Lyme Burgdorferi infection of SA node and atrium areas. These infections can be effectively reduced without using anti-viral or anti-bacterial agents, but by simply using combination of compatible optimal doses of Vitamin D3, Taurine, and PQQ. Cancer is potentially transmitted by HPV-16 infection. The best treatment of cancer should have not only inhibition of cancer activities, but also simultaneous elimination of the viral infection using optimal doses of these natural components of our body mentioned, although other overdosed supplements (Vit. C, etc.) or certain medications can inhibit these beneficial effects. In order to give the best treatment combination, optimal doses and selection of combinations must be determined individually and prevent potential drug interactions with other medications or supplements.

Biography:

Yoshiaki Omura received Oncological Residency training at Cancer Institute of Columbia University & Doctor of Science Degree through research on Pharmaco-Electro-Physiology of Single Cardiac Cells *in-vivo* and *in-vitro* from Columbia Uni.. He researched EMF Resonance phenomenon between 2 identical molecules for non-invasive detection of molecules, at Graduate Experimental Physics Dept., Columbia Uni., for which he received U.S. patent. He is also the creator of Bi-Digital O-Ring Test. He published over 270 original research articles, many chapters, & 9 books. He is currently Adjunct Prof. of Family & Community Medicine, New York Medical College; President & Prof. of Int'l College of Acupuncture & Electro-Therapeutics, NY; Editor in Chief, *Acupuncture & Electro-Therapeutics Research*, Int'l Journal of Integrative Medicine, (indexed by 17 major int'l Indexing Periodicals); Formerly, he was also Adjunct Prof. or Visiting Prof. in Universities in USA, France, Italy, Ukraine, Japan, Korea, & China.
