

## New Discovery of Treatment of Complicated Hemorrhoids without Surgery

**Ahmed M A Masaad\***

Department of Pharmaceutics and Pharmaceutical Chemistry, College of Pharmacy, Taif University, Saudi Arabia

Hemorrhoids, also called piles, are vascular structures in the anal canal. In their normal state, they are cushions that help with stool control. They become a disease when swollen or inflamed; the unqualifiedly term “hemorrhoid” is often used to refer to the disease. The signs and symptoms of hemorrhoids depend on the type present. Internal hemorrhoids are usually present with painless, bright red rectal bleeding when defecating. External hemorrhoids often result in pain and swelling in the area of the anus. If bleeding occurs it is usually darker. The new treatment is mainly depend on mechanism of contract the connective tissue surrounding the venous around anus by effervescent tannin base with strong anti-bacterial, antifungal and anti-viral effect of formula. The safety of drugs was tested in rabbits, rats first and then the experiment was done in hundreds of patient under license of ethics committee of Taif University. The percentage of cure conducted was 99%, this success leads to relive of pain over millions of patients around the world and minimize the risk of surgery treatment and cost beside quick relive of disease in two to three weeks with no chance of relapse of disease again.

### Biography:

Dr. Ahmed M. A. Massad is concern with discovery of new drugs and innovation in many new drugs and drug delivery system. Dr. Ahmed has memberships in many scientific societies and editor of PSC journal. He published more than twenty scientific researches in many sides of pharmacy, he discovered new treatment of cancer of colon and skin, possess innovative certificates in drugs delivery system and new drugs which are published in scientific journal.
